Script
Accessible Pointing Approaches for Web Applications

Introduction

1. Give candidate briefing script; wait to read.
2. Explain to candidate summary of what system is for.
3. Explain to candidate summary of what experiment is evaluating.
4. Ask candidate to sign two permission slips (and keep one).

5. Determine combination of systems candidate will be using.
6. Give candidate unique ID.
7. Plug in mouse.
8. Ask candidate to fill in preliminary questionnaire.

9. Give candidate training slip for next system they will be using. Combination system requires both instructions to be read.
10. Have candidate complete obstacle course featured in instructions.

11. Build ChibiPoint with appropriate settings.
12. Open laptop-sized browser window (1440x900)
13. Open folder of studies.
14. Unplug mouse.
15. Give candidate test list.

16. Close tab to activate next test.
17. Have candidate complete test.
18. **If tests remain, return to 16.**

19. Plug in mouse.
20. Move test results to unique folder.
21. **If systems remain, return to 9.**
22. Have candidate complete post-questionnaire.
23. Thank candidate for participation, and ensure they keep their permission slip.
